

LACHSÖL

Essential fatty acids taken from nature

Salmon oil is a natural source of good fatty acids. Contains the optimal blend of omega-3-, omega-6- and omega-9-fatty acids.

These fatty acids are important for

- the composition of fur and skin,
- circulatory health,
- the immune system,
- brain activity and
- mobility and joint health.

Salmon oil contains **arachidonic acid** which is not present in plant oils but is essential for cats. Arachidonic acid has proven most effective, even in solving problems affecting the fur and skin of pets.

The salmon oil is extracted from fresh, sustainably sourced Scottish salmon. These fish are kept in Scottish lakes under natural and ecological conditions.

Note: Changes to the diet

The taste of salmon oil is very well received among cats. A little salmon oil can help make it easier for cats to adjust to a new diet. Simply add a small spoonful of salmon oil to each meal.

Active ingredients

Omega 3: 24-26 %
Omega 6: 6%
Omega 9: 16-19%

Feeding recommendation

Weighing up to 10kg: ½ to 1 teaspoon

Weighing 10-25 kg: 1-2 teaspoons

Weighing 25-50kg: 2-3 teaspoons

Salmon oil can be administered without exact consideration of measurements.

Ingredients

100 % salmon oil

Ingredient profile

0 % raw protein, 0 % raw fibre, 99.5 % raw oils and fats, 0 % crude ash

Best before

The oil may solidify when stored at cooler temperatures.

This is a natural process which is reversed when the oil is warmed up.
