

PRO BASENPULVER

Minerals to combat over-acidification

A natural alkali powder is an effective treatment to alleviate surplus acidity in the body.

Meat and many other foods increased the presence of acids in the body. In a healthy gut with strong digestive muscles, these acids remain inside the gut and are excreted in the faeces. However, if the protective layer formed by the gut muscles and mucous membrane is weakened, the acids may enter into the bloodstream and spread throughout the whole body. Other weak points are the lungs, skin and kidneys which are no longer able to neutralise the incoming acids, in the event of illness.

Cat and dog owners report **various phenomena** in their pets which may be associated with excess acidity. Typical symptoms which affect the digestive system include: Consumption of earth or grass, excessive salivation, acidic belching, vomiting and heartburn

There are two ways of dealing with excess acidity:

- Reducing the intake of acidic foods (esp. meat) and increasing the intake of alkaline ingredients (e.g. vegetables). For dogs, a slight reduction in the amount of Anifit food is recommended along with the addition of vegetable flakes.
- Reducing the acidity of food given through the addition of a balanced alkaline powder.
- Only natural ingredients
- No preservatives

- Free from fillers
- No additives such as emulsifiers
- No aromas or colourings
- Gluten-free and lactose-free
- Sugar-free

Feeding recommendation

Ensure correct dosage!

Dogs: 2 x daily per 10kg of weight approx. 0.5g mixed into the food.

Cats: 2 x daily approx. 0.5g mixed into the food.

Ingredients

Calcium carbonate, potassium citrate, sodium bicarbonate, magnesium carbonate, calcium carbonate

Content per portion (0.5 g)

Calcium 26 mg
Sodium 26 mg
Magnesium 15 mg
Potassium 104 mg

Product information

Nutritional supplement for dogs and cats
250g
Store in a cool and dry location
